Why do we care?

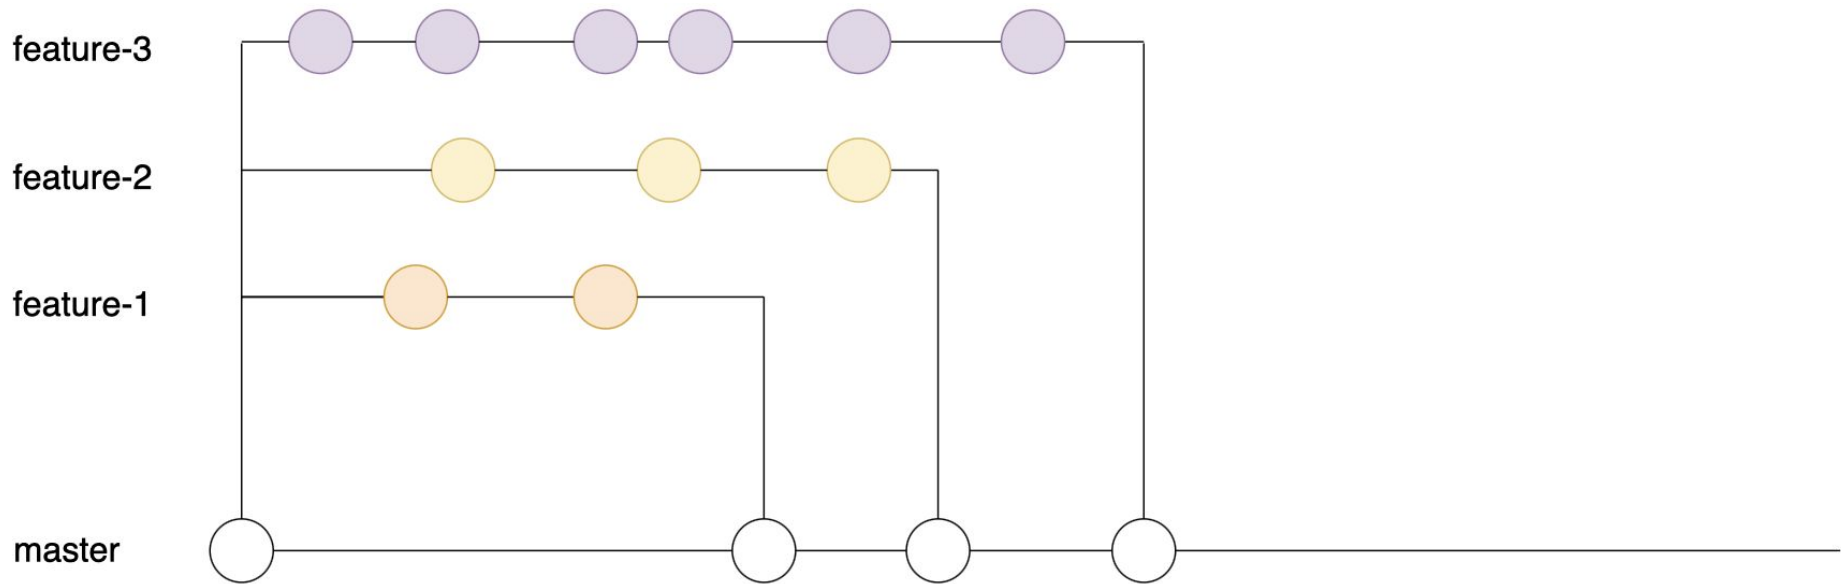

- Ability to work on multiple cards
 - At different stages/environments of development
- Ability to choose which cards go out
- Ability to react to production issues

What are our goals?

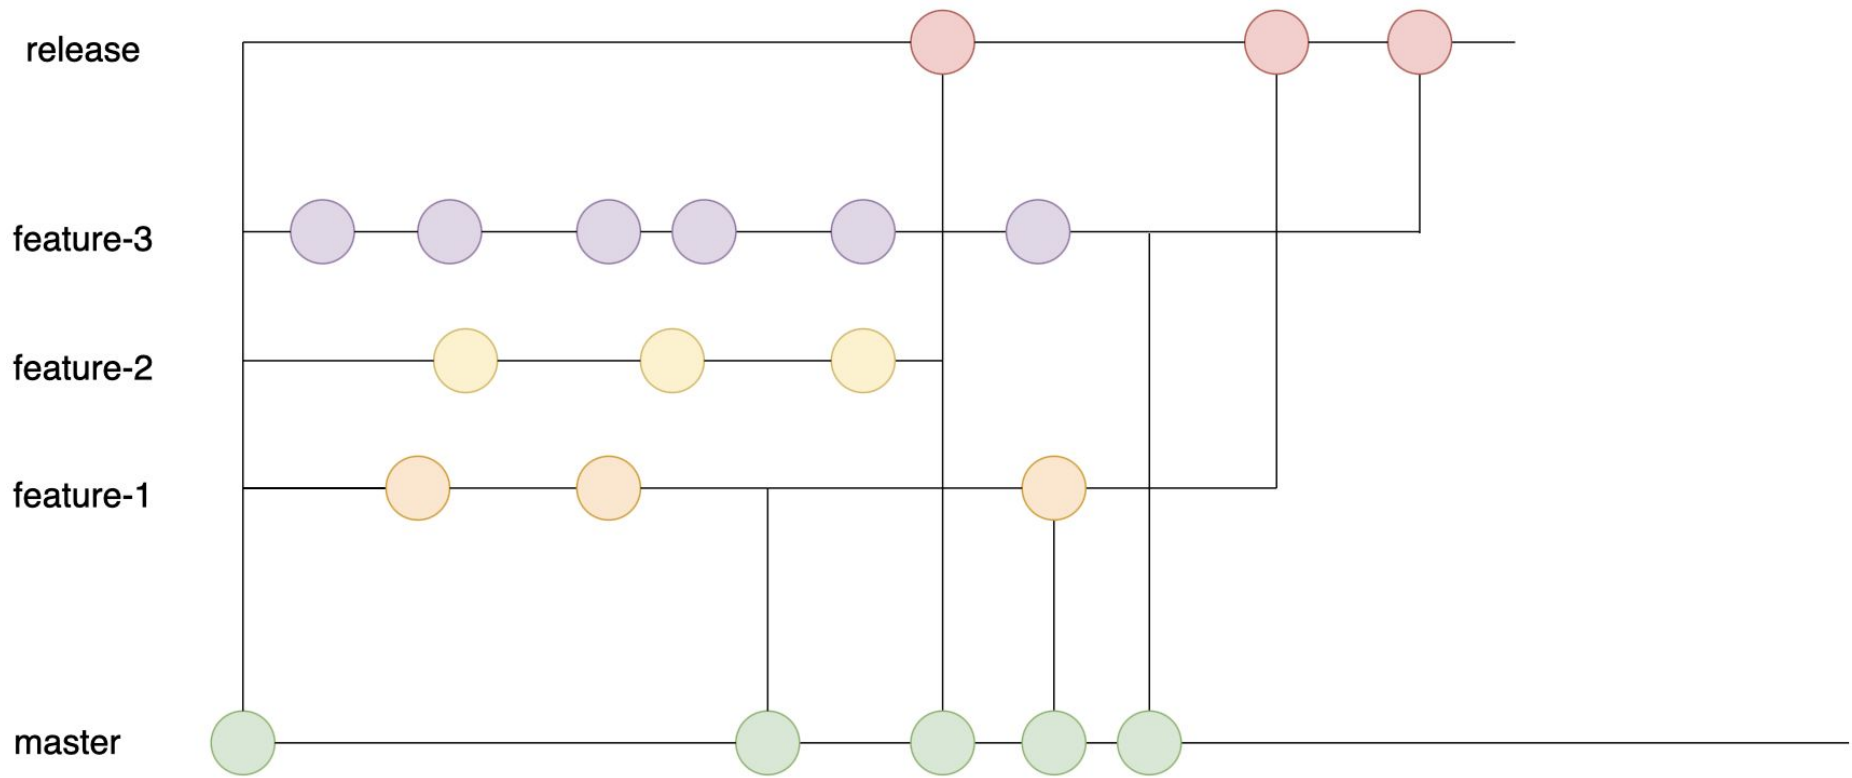

- Reduce complexity
- Production state is the same as states on at least one lower environment
 - Before: Testing of any state that would go to Production on lower environments
 - After: Debugging of state that is currently on Production

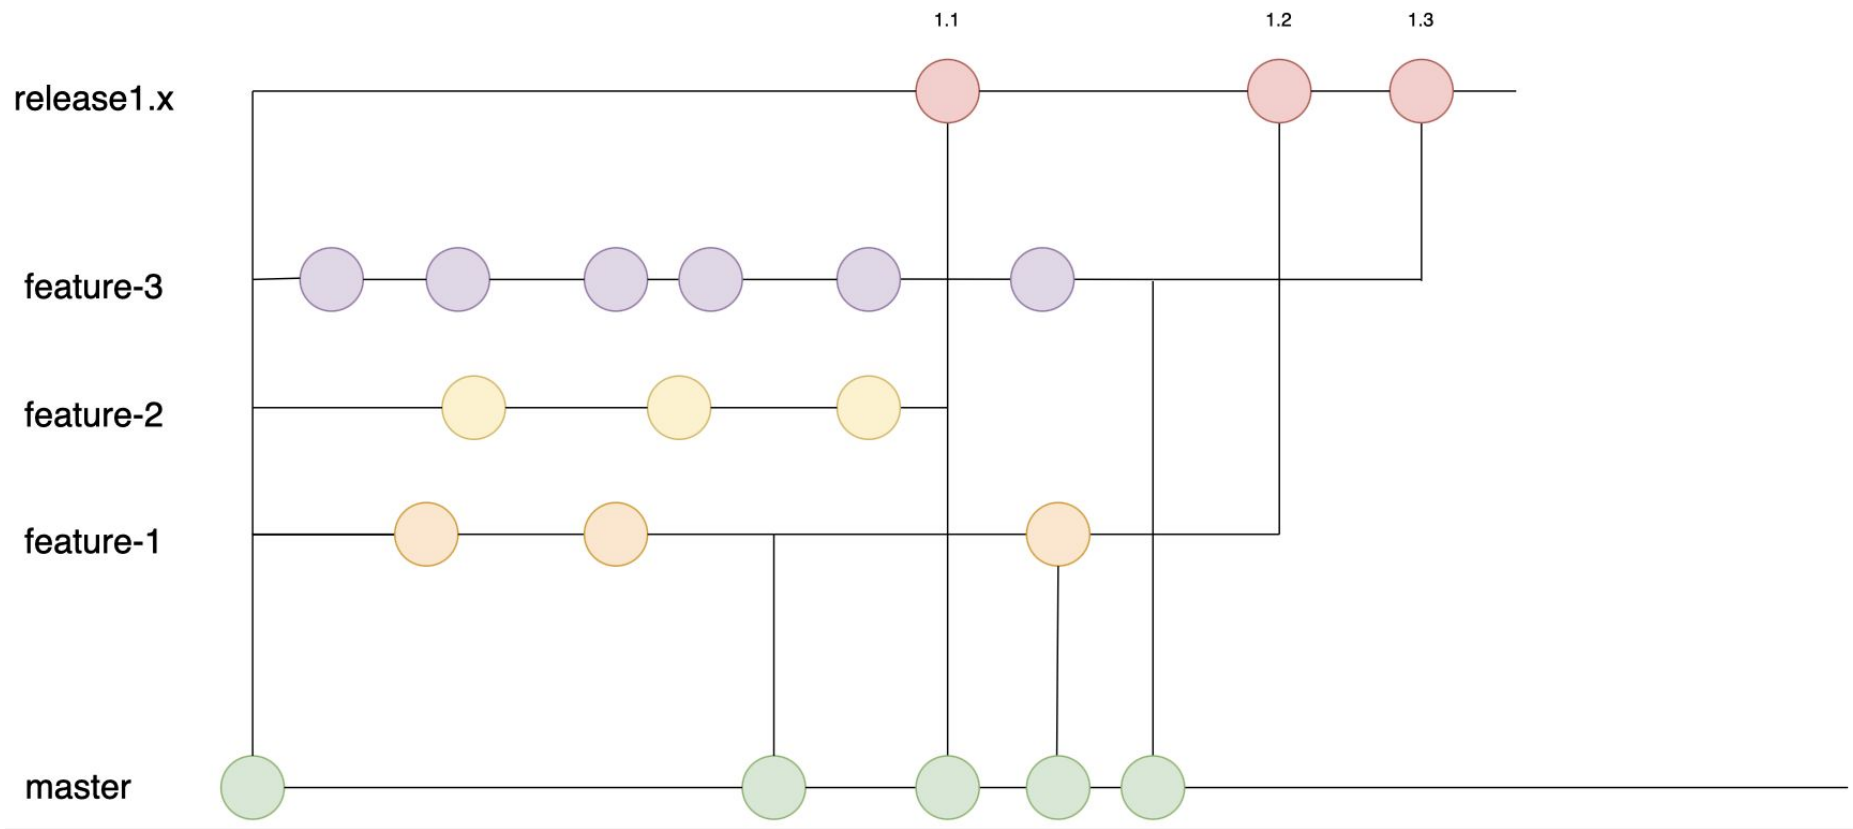

A base branching style

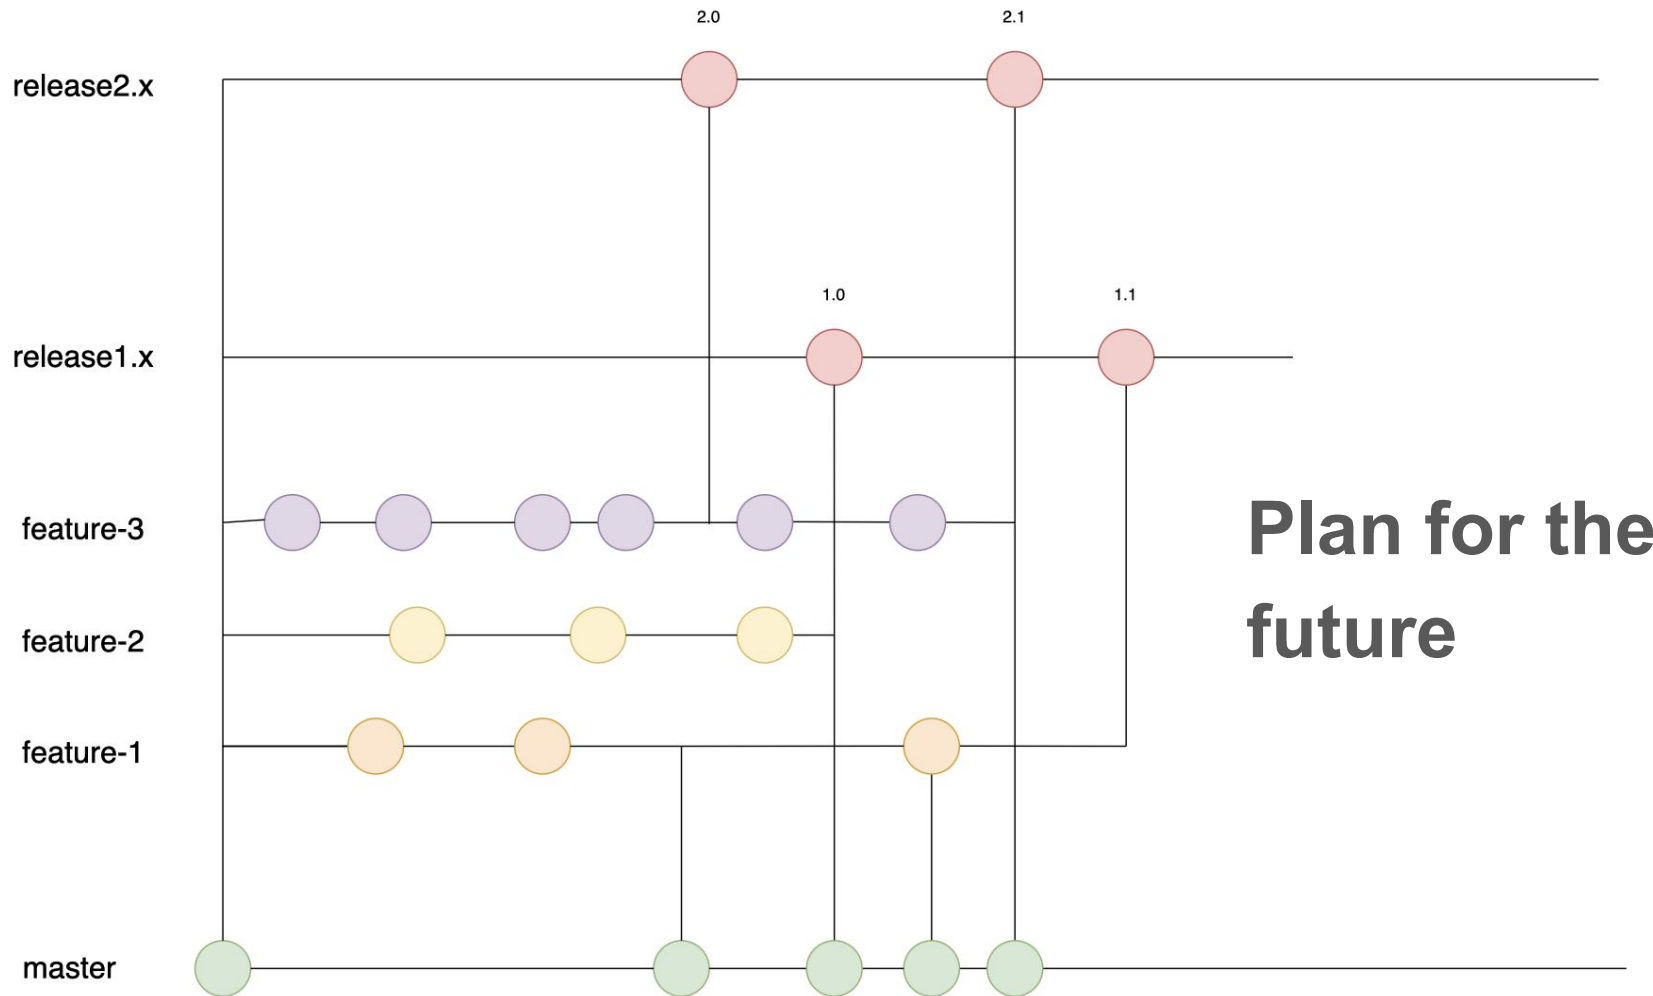

Maybe a little more features

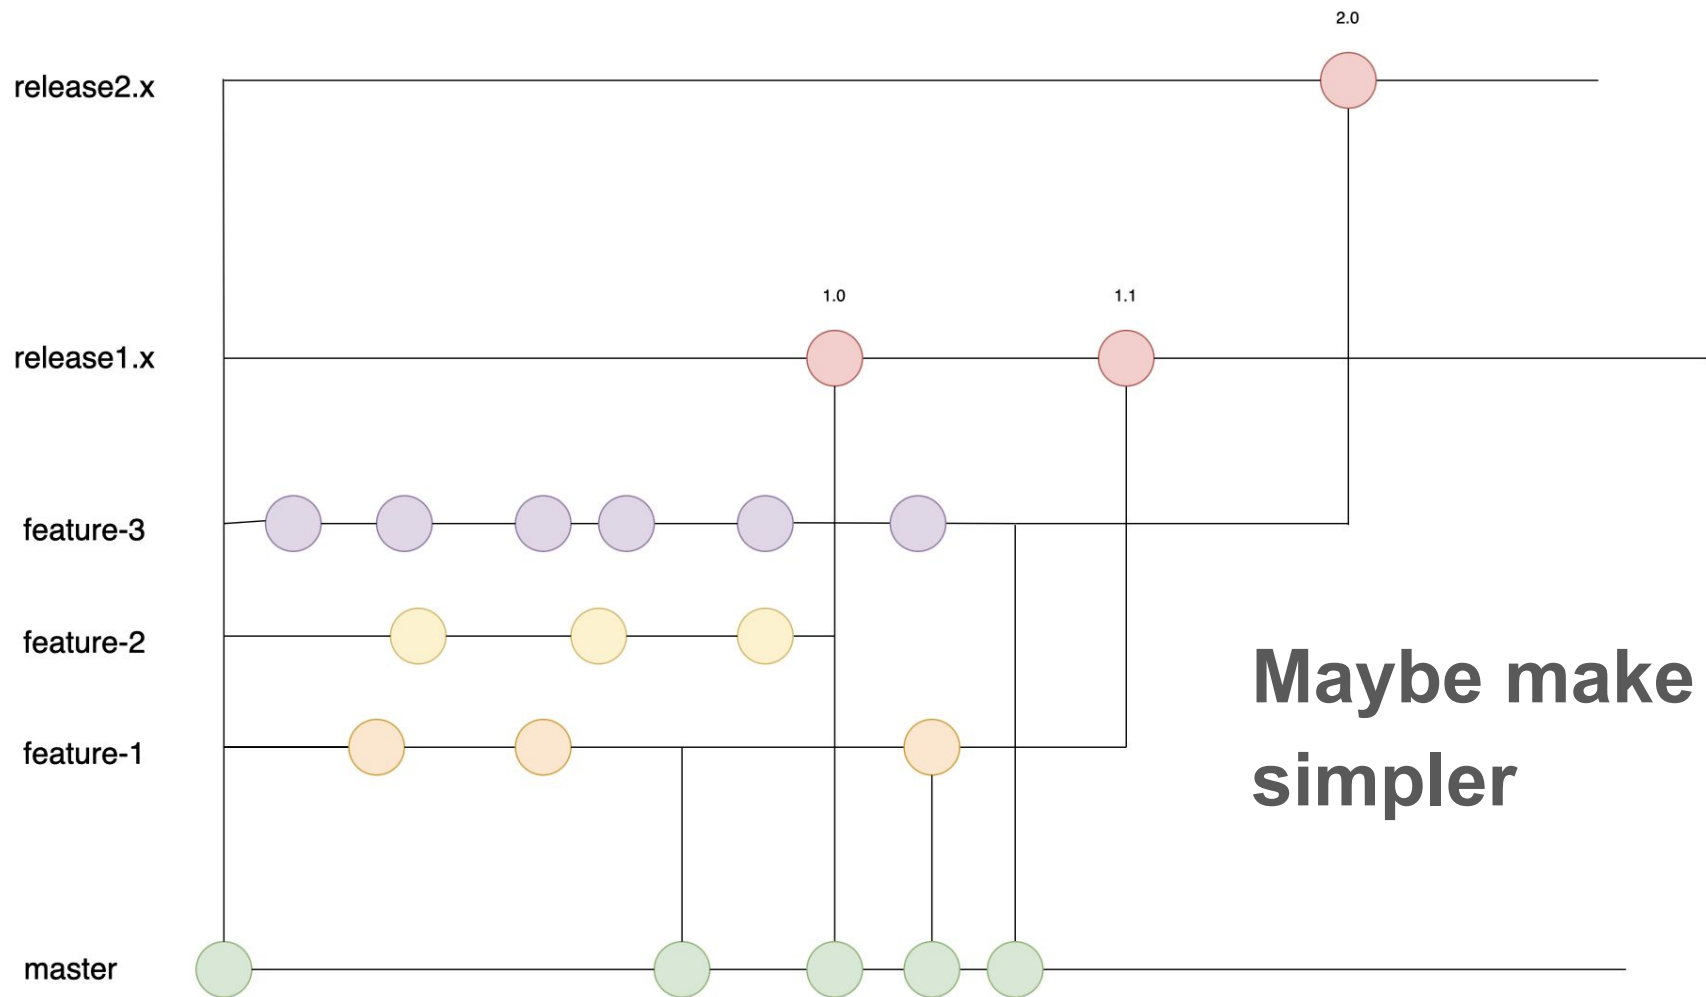

Hmm, we are going to have a release soon

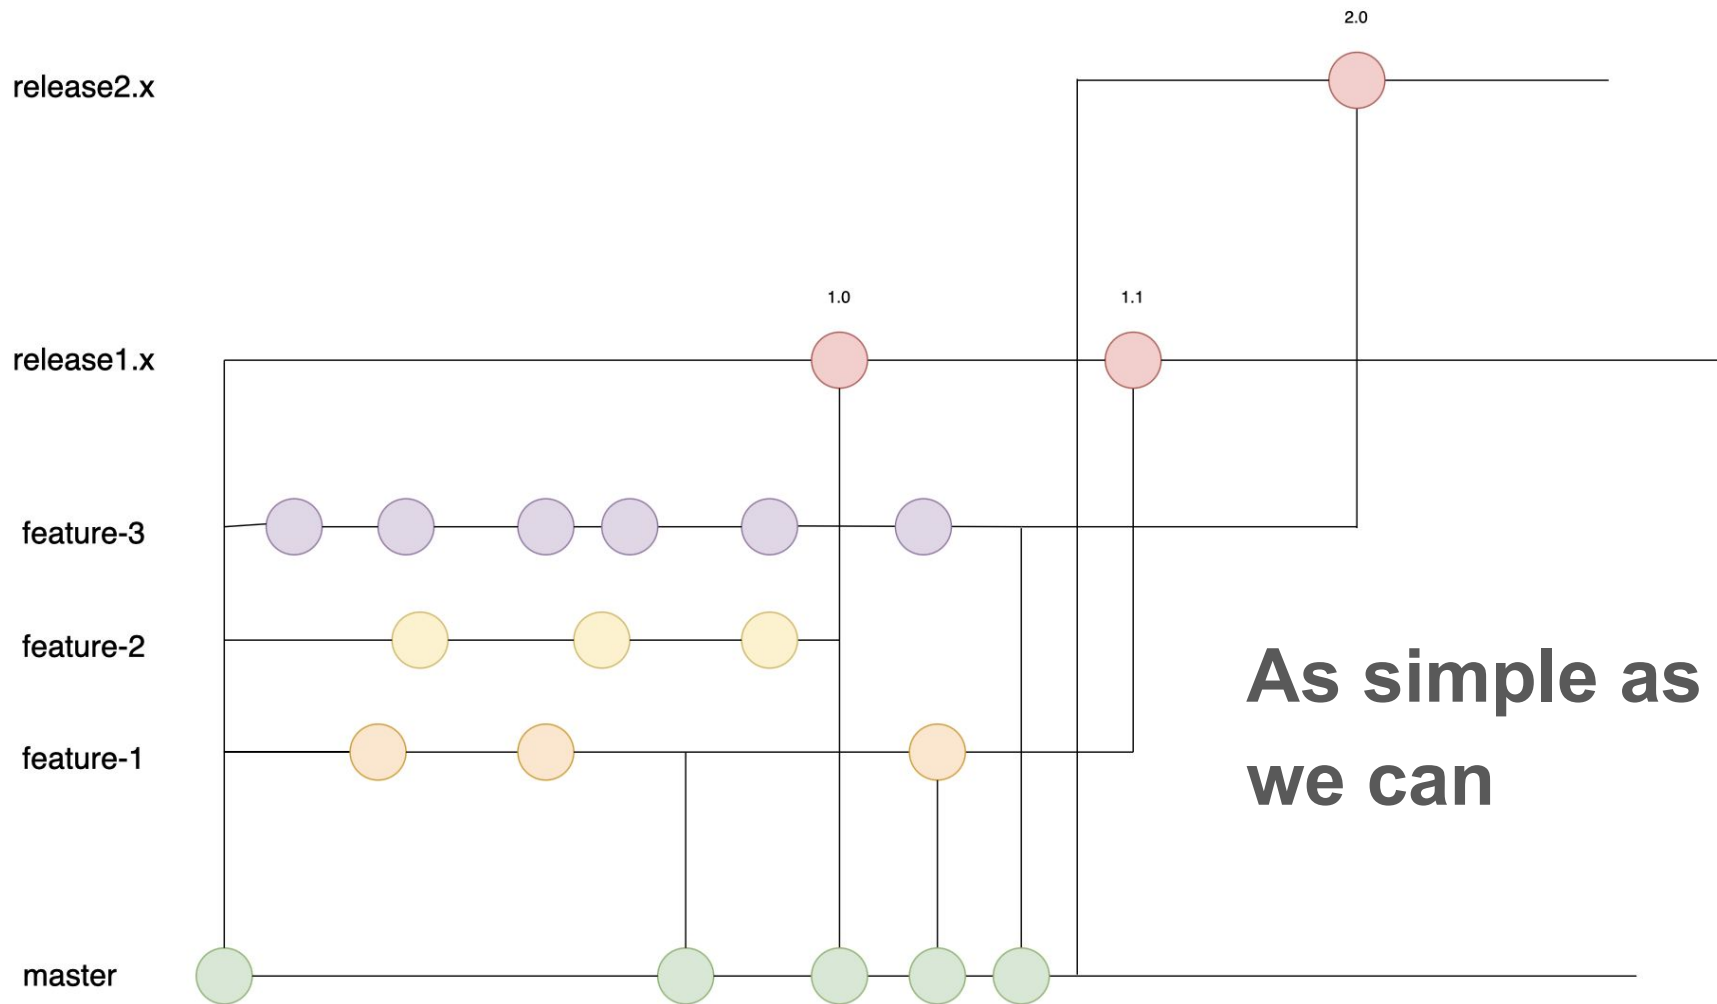

Let's label them

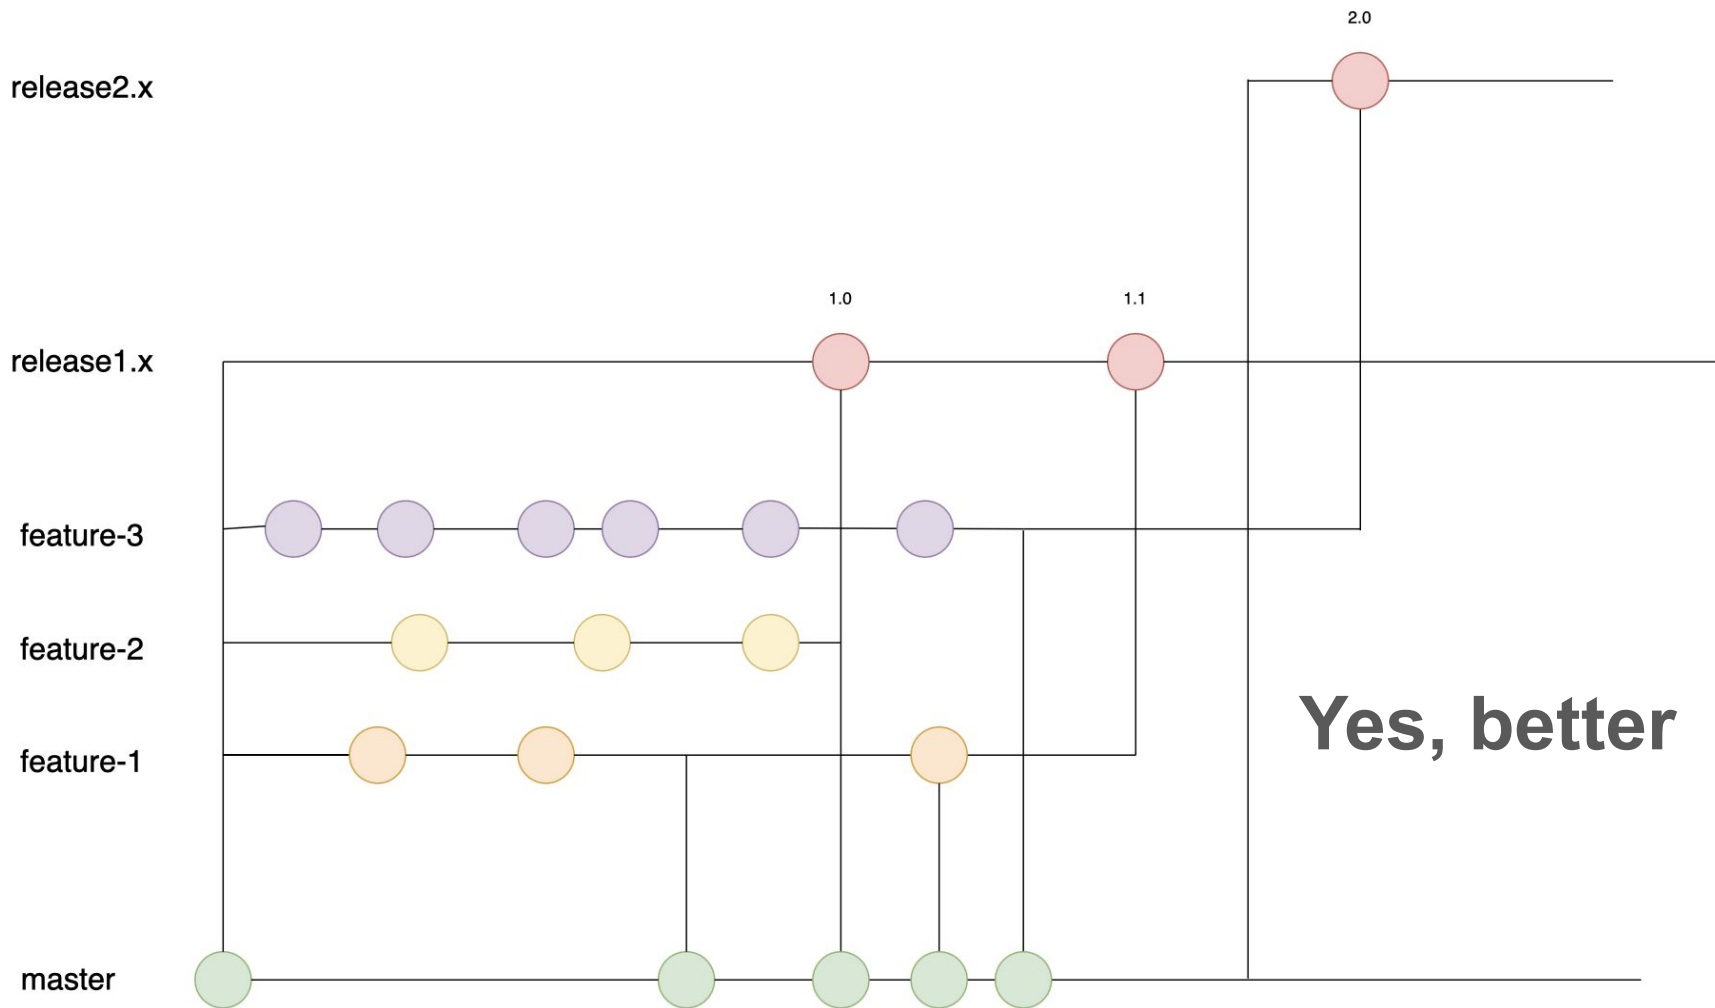

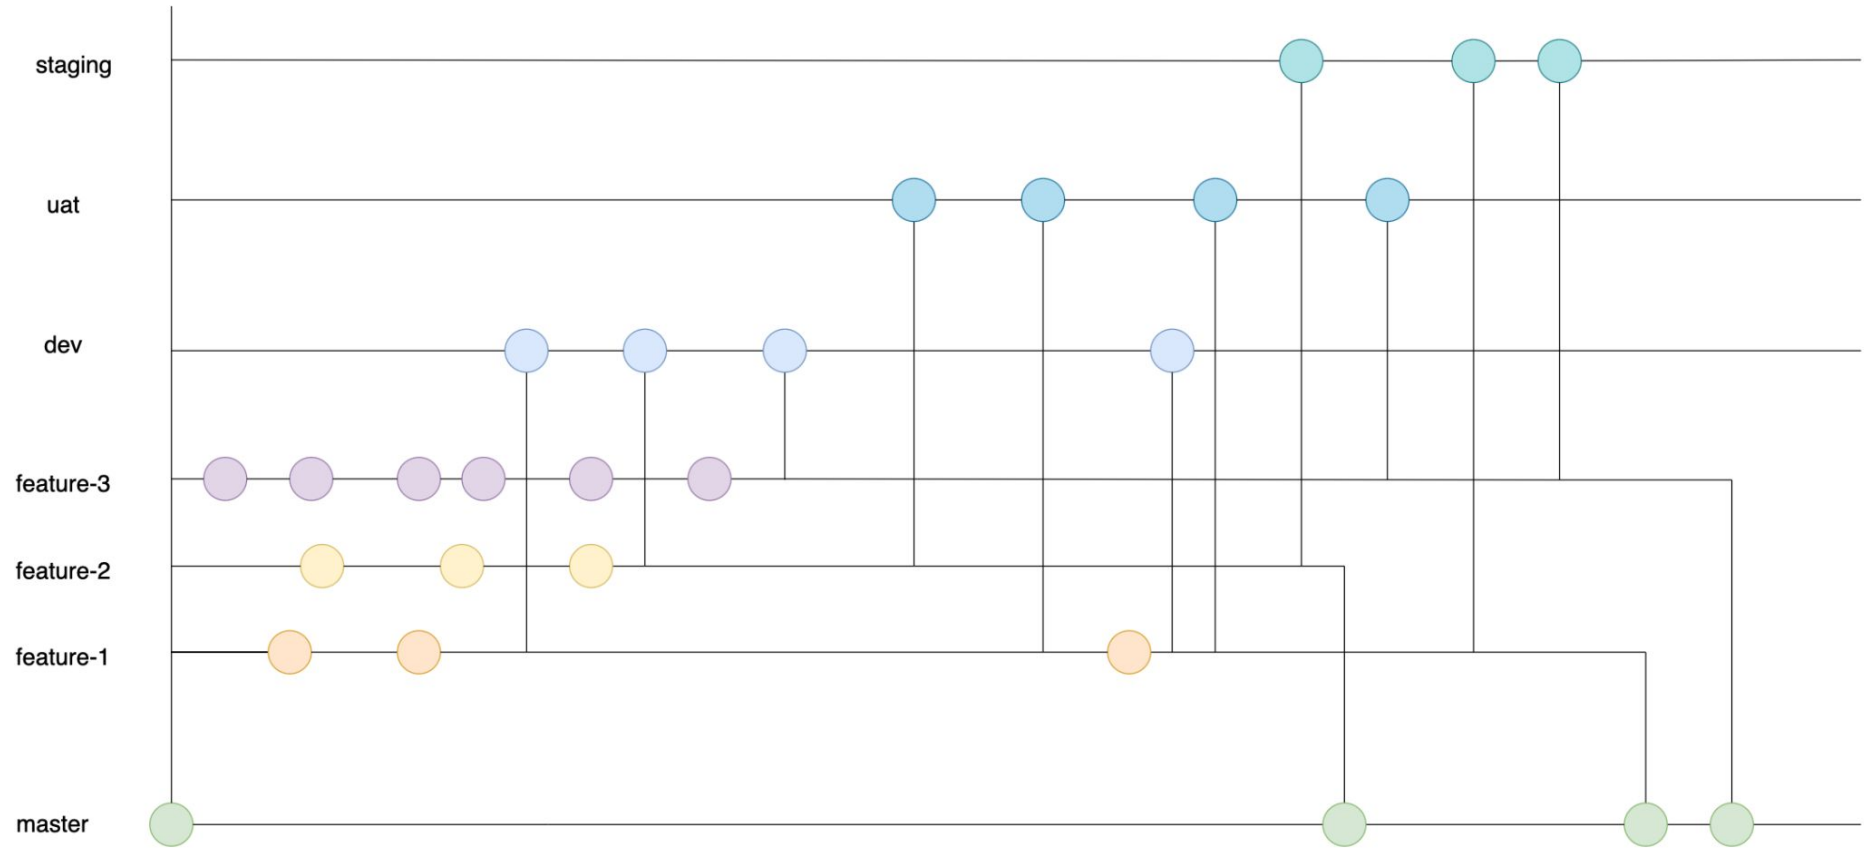

**Plan for the
future**

Maybe make it simpler

Happy Confluence with our Card Workflow

Ready for Dev	In Dev	Ready for Test	In Test	Ready for PO Sign-Off	Ready for Production Deploy	Done
	dev	uat		staging	prep	prod

Why do we care?

- Ability to work on multiple cards
 - At different stages/environments of development
- Ability to choose which cards go out
- Ability to react to production issues

What are our goals?

- Reduce complexity
- Production state is the same as states on at least one lower environment
 - Testing of any state that would go to Production on lower environments

Rather than explicit
Release Cycles, the
Sprint Cycle is the
Release Cycle

End. Discuss!
