

CI/CD

how?

We watched this video: https://www.youtube.com/watch?v=aoMfbgF2D_4

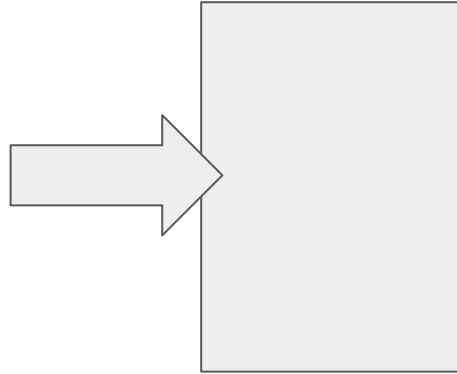

Continuous Delivery vs Continuous Deployment

- Being able to deploy master HEAD to production
- Deploying master HEAD to production

Be able to pull out any
build

Database Migration Scripts

- Add column
- Remove column
- Renamed Column
- Rename it back
- For all the data in column a
 - Replace “name” with “id”
- For all the data in column a
 - Replace “id” with “name”

Tests for Confidence

What to Test

- Live services that we are dependent on for deployment -> health check
- Having a (lower) environment that is exactly (or as much as possible) the same as production

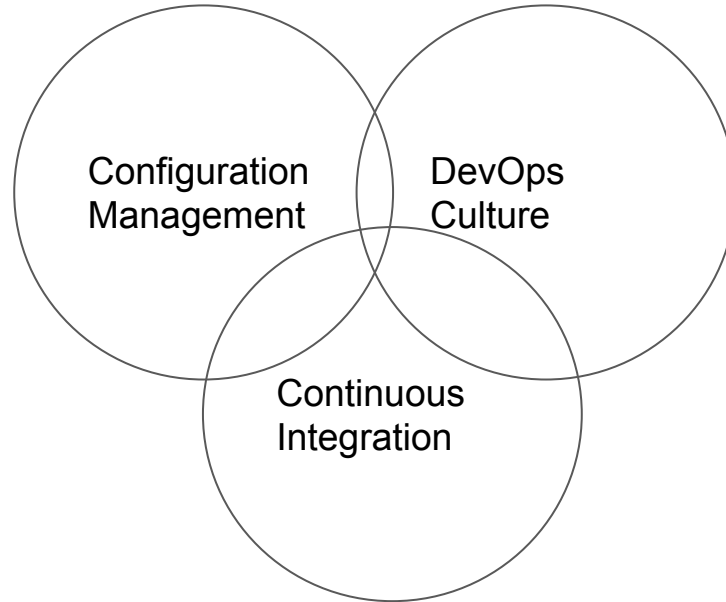

Fixing bugs in production

Fast Feedback

Toggling

It's product's decision what features will go out at any time, but tech needs to support development at all times.

Video Recap.
